

Bottle Well Attachment for Maier-Hancock Hot Splicers

A new Bottle Well Attachment that fits all Maier-Hancock portable hot film splicers, is announced by Maier-Hancock Industries, North Hollywood, Calif.

The rugged unit, compatible in design and finish to M-H splicers, eliminates accidental spillage and can be positioned anywhere on any edge of the base most convenient for the operator. It simply hooks onto splicer base and is held firmly in place by two thumb set-screws. The adjustment plate, which is slid under splicer base and hooked on opposite edge of base, spans either width or length of all M-H splicers.

Literature available on request.
